Defense Unicorns

Software is not the mission. Your mission is the mission. Stop struggling with software and IT and get back to what matters most - the mission.

Securing The Mission

Defense Unicorns builds open source technologies to deliver and integrate software and AI capability into production for national security systems at speed and scale. We are the leading experts in delivery to air gapped and disconnected systems, supporting our customers - Mission Heroes.

Unicorn Delivery Service   UDS
Unicorn Delivery Service

Software delivery for national security has unique challenges: diverse infrastructures, limited or no access to the internet, integration at scale, cyber security compliance, and system operators trained in mission effects, not IT.

Unicorn Delivery Service (UDS) solves these hurdles by making secure software delivery easy - empowering mission operators wherever their mission lives. UDS removes the complexity and inefficiencies of government secure technology stacks. Seamlessly integrating mission capabilities with an open-source 800-53 compliant platform (70% NIST Compliant) and Infrastructure as Code (IaC) for your target environment, UDS creates a secure, declarative software bundle repeatedly deployable to all your environments – without vendor locking your mission.

Solutions Powered by UDS

Deploy Complex Software Fast
Secure software delivered quickly and cost-effectively while accelerating Authority To Operate (ATO) timelines.

Freedom of Choice & Independence
You're never locked into any one decision, and you always own your data for any system.

Scale Systems Efficiently
We ensure easy, secure, and cost-efficient scaling with our preconfigured systems, adaptable to any infrastructure.

Avoid The Talent Gap
Prioritizing extreme usability to lower the barrier of entry, our solutions enable warfighters to focus on their mission.

Capabilities With Impact

☁ Cloud   ☰ On-Prem   ◎ Tactical Edge

Whatever software your mission needs, Defense Unicorns can deliver it securely, and effectively with UDS.

- **LeapfrogAI**
  Generative AI for your infrastructure to accelerate the understanding of complex mission data and streamline your decision-making process

- **Software Factory**
  Fully portable and pre-configured DevSecOps platform that accelerates delivery into secure production environments

- **Your App, Your Environment**
  Choose your own mission capability - The software your mission operators need for success, delivered to any environment your mission requires
