UDS ARMY

STREAMLINE SOFTWARE TO SOLDIERS

UDS Army is the fast and simple path for software vendors to bring mission capabilities to Army systems. Developed cooperatively with the U.S. Army DEVCOM C5ISR Center, UDS Army uses authorized DevSecOps pipelines to enable continuous delivery of mission-ready software up to Impact Level 5 (IL5).

✓ REDUCE TIME-TO-MARKET

Shrink the ATO timeline from 18 months to as little as 2 weeks with automated scans purpose-built to deliver the ATO body of evidence required by Army Authorizing Officials.

✓ INCREASE DISCOVERABILITY

Approved applications will be published in the Army App Marketplace for program managers to discover and acquire, with demo environments hosted to trial capabilities.

✓ LOWER COMPLIANCE COSTS

Reduce documentation expenses by more than 70% by automatically generating compliance artifacts as part of the delivery pipeline, not assembling them after deployment.
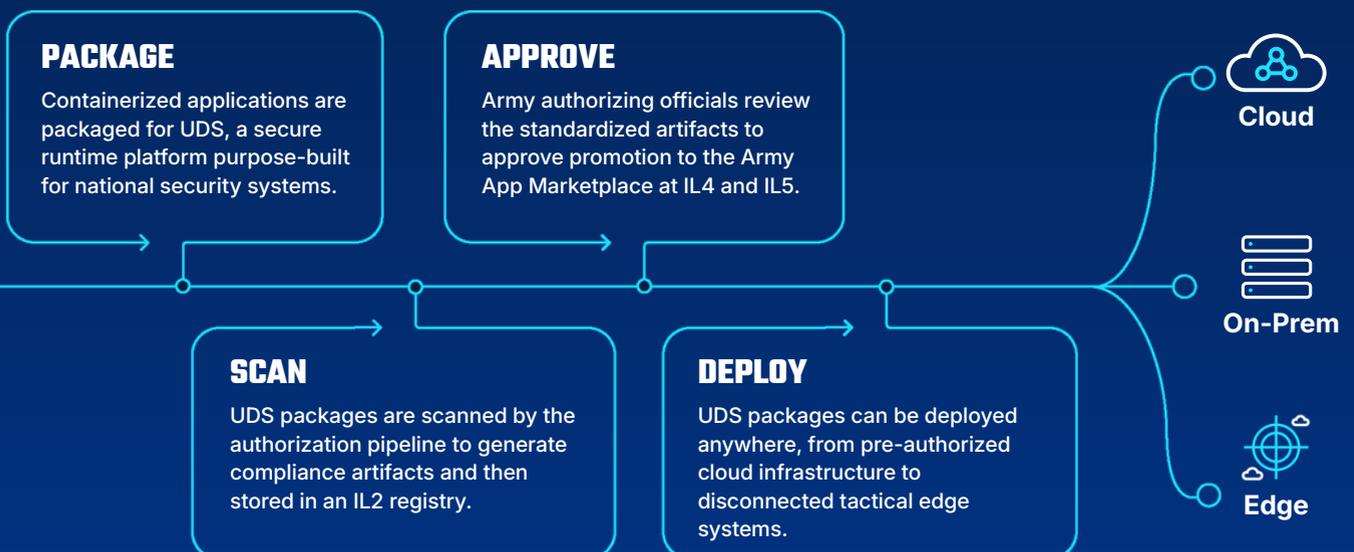

✓ SIMPLIFY SAAS HOSTING

Deploy applications to pre-authorized IL4 and IL5 environments hosted in the cARMY cloud, eliminating the need to build or maintain your own authorized infrastructure.

The Process

PACKAGE
Containerized applications are packaged for UDS, a secure runtime platform purpose-built for national security systems.

APPROVE
Army authorizing officials review the standardized artifacts to approve promotion to the Army App Marketplace at IL4 and IL5.

SCAN
UDS packages are scanned by the authorization pipeline to generate compliance artifacts and then stored in an IL2 registry.

DEPLOY
UDS packages can be deployed anywhere, from pre-authorized cloud infrastructure to disconnected tactical edge systems.
